Bdo ninja awakening guide printable pdf printable 2017

Bdo ninja awakening 2020. Bdo ninja awakening guide 2020. Bdo ninja awakening guide. Bdo ninja awakening skill build 2020. Bdo ninja awakening quest.

Will explain how to do this later. You can reappear on your target's back by pressing W after you disappear, and then move away by pressing S. The 3 Passive Skills Killer Training - MasterGrants Melee Evasion, Melee Attack and Accuracy buffs. Infinite Mastery - MasterGrants 700 HP when mastered until Lv. 56. Skilled Hunter - Masters+3 to Attack against monsters Are you willing to PvE? ■ Basics you need to know: Shuriken Unlike Kunoichis, it's better for Ninjas to use Shurikens. These two skills are enormously different, depending on which stance you're taking. In Transitioning Stance, you can use a front and rear mobility skill called Silent Charge. It can penetrate the enemy, but it consumes Stamina and has a 2-sec cooldown. Transitioning Stance Controls:Right-clickA, D Right-clickDrastic Measure ■ Ninja Awakening Basics: Awakening skills that you don't need You should master everything except Corrupt Sword Dance and Lv. 58, 60 Flows Corrupt Sword Dance:No Super Armor, Guard, or CC—just mere WP recovery and Bleeding Damage.You can just use it quickly by hitting left-click while casting Seamless. One point will master this skill. Floor Sweeping (Bound + Down Smash)Can be used as an instant, hidden skill to invoke Shadow Stomp and also can blow away knocked down enemies with its Down Smash effect. When right-clicking twice in normal stance, you raise your both arms and assume the Transitioning Stance. Just use Rosar. +10% Down Attack damage. (You get the Forward Guard effect while switching stances.) There are skills that have slight changes in skill animations and effects when used in Transitioning Stance. The casting motion is long, but can be canceled. This can go on forever if you use your skills at the right moment and the enemy is not immuned. ■ Basics you need to know: Extra Damage ▲ Types of Extra Damage Speed Attack and Counter Attack are not that useful. ■ Basics you need to know: Forward Guard Forward Guard blocks all the damage and CCs (except for Grapple) from your enemies in front. When the enemy's DPS is too high, you're most likely to be dead. ■ Basics you need to know: Ninja Awakening Gameplay Ninjas after Awakening have fewer Forward Guard and Super Armor skills, compared to other classes. That means you're likely to get killed when you deal damage face-to-face with the enemy. Those skills will keep pushing you backward if you are blocking them with a Q skill. Warrior's and Valkyrie's Guards have Super Armor effect rearward. Ninjas can deal massive damage with Serpent Ascension in Transitioning Stance. 100% Critical Hit rate and 20 DP to target. [Recommended Skills] Black Moonlight (Stiff)Gives a brief Super Armor effect, but it will be canceled most of the time. (Unable to use in non-combat status) Automatically switches to non-awakening status when used in Awakening status. Shadow SlashYou can do WP recovery, mob kiting, sideway evasion all with this one great skill. It's better to get as many Att speed buffs as you can through Skill Add-ons. Shadow Slash, and Alchemy Stones. When Controls are maintained in Awakening status, an evasive mobility combo Ghost Step-Drift is possible. ■ Basics you need to know: Crowd Control Skills and Action Restrictions Crowd Control Skills cause an Action Restriction, which is a term used when a character is temporarily unable to perform any actions due to enemy attacks. Then, you can use Down attack - Serpent Ascension. Bloodthirst: Katana Showerhower (Floating, Super Armor)A useful Super Armor and HP absorb skill. Don't try to improve DP. Your combo should be like Stiff-Stun-Stiff-Stun. CC Skills Star: Malice (Stiff) - MasterRanged attack that causes Stiffness. Good to use one PvE to pull aggro from mobs in distance. Otherwise, you'll get beaten up. Stiffs the target on reappearing. Won't reduce any cooldown even mastered, so better with 1point. Ankle Cutter (Bound) - MasterA skill great for buffs. This makes you look like you are dealing massive damage. Among all classes, Ninja requires the highest level of player control technique for PvE. ■ Basics you need to know: Attack Speed Ninjas must have the Att Speed of 5. Star: Malice, the non-awakening ranged skill, is a big advantage of using Shuriken so you should use one. To improve Accuracy, Use Quitar Shuriken to improve Accuracy and use Estique Shuriken to improve Attack Speed. It automatically switches to normal stance when used in Transitioning Stance. Familiarize yourself with these basics, and let's move on to the Awakening skill part. ■ Ninja Awakening Basics: Transitioning Stance Many of those who just got awakened find it difficult to use the Transitioning Stance. Execution (Lv. 58 Flow) a.k.a. Suicide: It's a skill that is usually used after Sudden Decapitation as a combo. (e.g., Serpent Ascension, Sudden Decapitation, Corrupt Sword Dance, and Murderous Intent.) The Serpent Ascension—the main DPS skill—gains more hits, and Sudden Decapitation decreases to 2 hits. ■ Introduction This is a walkthrough for Ninjas who just reached Lv. 56 or about to reach Lv. 56 and are ready for Awakening. Offers Super Armor while charging. Seamless (Forward Guard on 1st hit, Bound)A precious skill that can only be used by pressing the space bar while casting other skills. The skill has melee attack buff. Brace - MasterNeedless to say, the best WP recovery skill. A target that falls down by Knockdown, Bound, Float, or Grapple can only be knocked down again with Grapple. You can use this skill in Awakening also. Ghost Step - MasterEvasion Skill. ■ Ninja Awakening Basics: Skills that automatically switch stances Drastic Measure (Bound)It's a charging skill that automatically switches to Transitioning Stance when used. But the damage from your enemy will come straight in. Not recommended to use recklessly since ninjas don't have much Super Armor and Guard. Ninjutsu: Blade Spin (Float)This skill is often used to switch to non-awakening while dealing damage, since it automatically switches to non-awakening when used in Awakening status. It's a high-risk, high-return skill. The Controls overlaps with Serpent Ascension and Katana Shower (F), so it is occasionally used in between Serpent Ascension and Katana Shower's cooldown and saves you from death. Shadow Stomp (Float)- MasterDecent damage dealt with Air Attack and can do an instant long-ranged attack in PvP. Many of you would have chosen to play Ninja for his swift movement, hiding skills and assassination skills that eliminate your enemies in the blink of an eye. However, Ninja will lose all his agile movement skills and Attack speed after Awakening. If anything, just put the first base skill point in it and leave it that way. Even if you don't intend to attack your enemy from its back, you can still use the skill to evade your target's skills. When you succeed with the Murderous Intent (Stiff) - Drastic Measure (Bound) combo, you'll be switched to Transitioning Stance. Skill Add-ons such as DP is added to give more durability to Ninjas since they have less Guard, Super Armor, and HP absorb. ConcealmentThe iconic skill of a Ninja, but you will find your ninja getting suddenly slowed down when you cloak.You can use this skill in Awakening when you give points to the awakening skill. Shadow Cloak and put Ninjutsu: Concealment on your shortcuts. Casting speed is unnecessary. The passive 10% speed boost before Awakening doesn't apply anymore after awakening, which means you'll move slower. Shadow Clone and Crescent Slash are also recommended, but they can wait until you have sufficient skill points. ■ Ninja Awakening Basics: Serpent Ascension Serpent Ascension is the alpha and omega of Ninja's damage dealing ability. When using skills before Lv. 56, focus on leveling with Fox Claw, Shadow Slash, Shadow Stomp, Shadow Clone, Beheading the Dead, Blade Spin, Fatal Blow, Fatal Blow Combo, Black Moonlight, Ninja Step, Brace, and Ghost Step.(Main DPS Skills: Beheading, Blade Spin / Alt DPS Skill Fox Claw, Fatal Blow and Combo, Shadow Stomp) Make sure you respect all your combat skills right before you hit 56 and then follow this walkthrough. You'll eventually use Nouver, anyway. Gains Invincible->Super Armor, and penetrates targets on left, right and rear. There's a Forward Guard effect on the first hit, so you may just cancel the skill after the first hit. However, it's a useless skill. You should approach the target from its back, inflicting CCs and dodging attacks. Drastic Measure has a long animation after casting, so no one actually uses it. You can run with 15% increased speed without Stamina consumption for 15 sec. You'll see a bar on the side, and when the target keeps on hitting you or when the enemy's DPS is too strong, the bar will break and you'll receive damage. Skills that penetrate the enemies, such as Slashing the Dead or Violation, will penetrate the guard and cause Back Attack, allowing the enemy's CCs to come in. Unlike Forward Guard skills, Q block skills do not break even after getting hit by continuous skills like Witch's Lightning Chain. The Best of the Best mobility skill on long distance traveling. ■ Basics you need to know: Super Armor Super Armors block all CCs (except for Grapple) from your enemies while you're casting a skill. By hitting A, you can reappear from below and kick, and D will make you reappear from above and smash. These skills are better used after Transitioning Stance - Serpent Ascension. Mobility skills Ninja Step - MasterThe life of Ninja. Disclaimer: This article contains curated tips, guides, other useful information posted on Inven KR by the users. Penetrating the target and being invincible while moving makes the skill great for killing your enemy from its back. Super Armors prevent your character from falling down to the ground and also prevent your enemy from cancelling your skill with a CC. It will make the enemies float, and also cause Air Attack with Sword Energy. Recovers 200 WP when mastered, so it's mandatory to use the skill after every cooldown in battles. Smokescreen (Stun)A preceding skill of Concealment that has Stun effect and 18% evasion, but is still effective even if used alone. ■ Ninja Awakening Basics: Non-awakening skills that still used after Awakening [Mandatory Skills] 1. This is a unique perk of a Ninja that no other classes have. When you switch to Awakening by pressing C in Non-awakening status, you basically take the normal stance. You must have expectations for even greater speed and agility after awakening. Action Restrictions can be affected by resistance and each resistance can be classified into 4 groups: Stun/Stiff/Freeze, Knockdown/Bound, Grapple, and Knockback/Floating. This means that no CCs (except for Grapple) are inflicted from the back, even if you go to the rear side of your enemy using Block Jump or Violation. 4. Suicide Fall (Grapple)Non-awakening Grapple skill. The skill description looks good since it says it'll cause Knockdown and Air Attack and Down Attack, but the casting animation is way too long, so it never actually hits. Mach Explosion (Lv. 60 Flow) a.k.a. Bluff Explosion:It's a skill preceded by Drastic Measure. Instead, you will see some slow and heavy action. It has 5% Att speed self-buff and many use Attack against monsters and HP recovery as their Skill Add-ons.Shows flashy moves when used with Ghost Step in PvP. 2. Give points. This is what makes Serpent Ascension so powerful. But without any Super Armor or Forward Guard, when you use the skill right in front of your enemy you'll get beaten up and the skill would likely be canceled. When Controls are maintained in Non-awakening status, Ninja Evasion is activated. Target Chase - MasterUnlike Kunoichi, Ninja can use this skill only with keyboard shortcuts. Vacuum Slash (Forward Guard on 1st, 2nd, 3rd hit, Floating, Air Attack, Knockdown on last hit)This skill has an almighty finishing blow. You can use Murderous Intent (Stiff) - Drastic Measure as a skill chain.The post-casting animation is pretty long, so cancel the motion with switching C and fade away with Ninja Step. Other useful skills Ninjutsu: Block Jump (Stiff)A skill that makes a newb kicked on the ass and get his mind blown away. Please note that such guides and information are not objective truths and may not reflect the latest patch or meta changes. Mandatory on PvP. 3. Resistance can be increased by transfusing the crystals into your gears. Float in PvE)Can be used as a dash skill. Keep in mind that the resistance for Air Smash and Down Smash cannot be improved, and all resistances are only applied up to 60% in PvP. ▲ Types of Action Restrictions Same type of Action Restrictions (i.e. Stiff-Stiff or Stun-Stun) won't work one a same target twice, so choose your combo wisely. Without this skill, Ninja is absolutely worthless. Katana Shower, Seamless, and Vacuum Slash cause you to switch stances again, which is quite annoying. But still, it has a wide AoE so it's good to give some points. Ghost Greeting (Stiff. The maximum hits for Sura Katana (3 hits) and Sword Energy (5 hits) will increase to 5 hits and 6 hits, respectively. Even if you switched your class from Kunoichi, you should get rid of your Kunai and start using Shuriken. After all, all your main skills before Lv. 56 won't be used anymore after awakening.
